

ORGANOCIDE

Organocide is a nature-safe, organic spray oil effective on 25 insects and several foliar diseases

DUAL PURPOSE PRODUCT

Insects: Organocide is effective on small, soft-bodied insects and scale insects (armored and soft scales) such as mites, aphids, whitefly, fungus gnats, chinch bugs, and mealybug. It kills the eggs, larvae, nymphs, and adults of target insects.

Diseases: Organocide effectively prevents and cures foliar diseases which thrive in moisture-rich environments such as powdery mildew, black spot on roses, and greasy spot.

SAFETY MEANS PEACE OF MIND

Organocide is safe for people, pets, and the environment. It is exempt from Federal EPA registration because of its safe formulation. It can be sprayed on edible plants, and there is no re-entry time after application; plants can be harvested right after a spray. When applied as directed, there is little risk of leaf burn when applied to plants, even on hot, sunny days. Very few plants have adverse reactions to Organocide (see label for list).

FINALLY, AN EFFECTIVE ORGANIC PESTICIDE!

Organocide works with three primary modes of action:

1. The dense oils suffocate insects on contact
2. Organocide leaves a micro-film on the plant that repels egg-laying females. This prevents immediate re-infestations.
3. The fatty acids in the oils are toxic to targeted soft-bodied insects when they soak into their bodies

These modes of action provide superior performance equal to or better than "traditional chemical pesticides" without the risk. Organocide has been proven effective in university studies and, more importantly, in the real world.

Organocide is popular with homeowners as well as with professional horticulturalists and is backed by years of proven performance.

Ingredients:

Sesame oil:	5%
Refined fish oil:	92%
Emulsifiers:	3%

Rates

1-2 Oz per gallon of water.
Spray as a foliar spray to get effective coverage of problem area. One quart will make approximately 16 gallons of product. For larger applications, one gallon of concentrate will treat approximately one acre.

Available sizes:

32 oz Concentrate
24 oz Ready to Use
32 oz Hose-End Applicator
2 x 2.5 Gallon Jug Case
30 & 55 Gallon Drums
110 & 250 Gallon Mini-Totes
